KIRAN VADLAPALLY

Houghton, MI (open to relocation) | vadlapallykiran@gmail.com | linkedin.com/in/kvadlapa | github.com/kvadlapa

SUMMARY

Backend software engineer with 3 years of experience (Java/Spring Boot, C#/.NET) who designs, builds, and operates distributed services end to end, focused on reliability, fault tolerance, and scale.

EXPERIENCE

Software Engineer | SoftwareIDM — Houghton, MI | December 2025 - Present

- Designed and own the ServiceNow connector end to end, from architecture through release and production support. Replaced hardcoded, per-table logic with a JSON configuration-driven architecture (tables, APIs, pagination, filters), so one codebase serves 3+ clients and onboarding a client takes configuration, not code.
- Build and maintain C#/.NET connectors that sync identity data several times a day for 6+ client companies across Microsoft Entra ID, Active Directory, Exchange Online, Intune, CyberArk, HashiCorp Vault, SuccessFactors, and Oracle HR, with OAuth 2.0 auth and identity lifecycle operations.
- Implemented incremental sync with high-watermark tracking, pagination, and filtering, so each run fetches only records changed since the last successful sync rather than all 50,000+, cutting API calls and run time.
- Made connectors fault-tolerant against unreliable third-party APIs with retries for transient failures, HTTP 429 rate-limit handling, and idempotent writes, so a rerun never creates duplicate records.
- Operate connectors in production: trace failures seen only with real client data, such as API errors, serialization mismatches, and data-consistency gaps, to root cause, then ship, test, and document the fix.
- Write unit and integration tests for connector changes, since the team has no dedicated QA, and release through Docker, Azure, and Bitbucket Pipelines CI/CD.
- Review teammates' pull requests and write Confluence runbooks and resolution guides used by engineers, consultants, and clients.

Software Engineer | Antra, Inc. — Remote | May 2025 - November 2025

- Built C#/.NET REST and SOAP integrations for enterprise identity clients, including authentication and data transformation between source and target systems, and resolved client-reported integration failures.

Associate Software Developer | Accenture — Hyderabad, India | April 2022 - August 2023

- Developed Spring Boot microservices with Hibernate (JPA) for a production insurance onboarding platform and documented their REST APIs in Swagger for the teams consuming them.
- Diagnosed slow SQL behind daily production reports using execution plans, then added indexes and removed N+1 query patterns, cutting report response times by about 33%.
- Contributed to Jenkins and AWS CI/CD pipelines that automated manual release steps.

Teaching Assistant and Grader | Michigan Technological University — Houghton, MI | August 2024 - May 2025

EDUCATION

M.S., Computer Science | Michigan Technological University, Houghton, MI

B.S., Electrical and Electronics Engineering | MLR Institute of Technology, Hyderabad, India

TECHNICAL SKILLS

Languages: Java, C#, SQL, VB.NET; object-oriented design, design patterns

Backend: .NET Framework, ASP.NET, Spring Boot, Hibernate (JPA), REST, SOAP, microservices

Data: PostgreSQL, MySQL, SQL Server; query tuning, indexing, execution plans

Reliability: Incremental sync, idempotency, fault tolerance, retries, rate limiting, unit and integration testing

Engineering Practices: Full SDLC, code reviews, source control, CI/CD, testing, production operations

Identity and Security: OAuth 2.0, OpenID Connect, Microsoft Entra ID, Active Directory

Cloud and DevOps: AWS, Azure, Docker, Jenkins, Bitbucket Pipelines (CI/CD), Git, Linux

Certification: Microsoft Certified: Identity and Access Administrator Associate (SC-300)
